DETAILED ACTION

Election/Restrictions

1. Claim 1 is allowable. The restriction requirement among species, as set forth in the Office action mailed on 31 October 2006, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claim 6, directed to species II is no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim. However, claims 7, 9-12 and 15-17, directed to species III and IV are withdrawn from consideration because they do not all require all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

2. This application is in condition for allowance except for the presence of claims 7, 9-12 and 15-17 directed to species non-elected without traverse. Accordingly, claims 7, 9-12 and 15-17 will be cancelled.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William M. Schertler on 14 February 2008.

The application has been amended as follows:

Cancel claims 7, 9-12 and 15-17.

Amend claim 1 as follows:

1. (Currently Amended) An infrared light condensing apparatus, comprising:

a solid immersion lens for accepting an incident light or emitting an outgoing light, said solid immersion lens having a base plane on which a specimen is disposed in direct contact with the solid ~~state~~-immersion lens;

an antenna ~~formed of~~ comprising an electrically conductive material, the antenna having a probe disposed away from said base plane of said solid immersion lens at a distance not more than 1/4 of an effective wavelength of the light;

a holder means for retaining said antenna; and

a position control means for controlling a position of a tip of said probe by means of said holder means,

wherein operating said position control means allows:

the incident light to concentrate as a near-field at a desired position of the specimen on the base plane of said solid immersion lens or

a near-field from a desired position of the specimen to be converted into a propagating wave corresponding thereto and then the propagating wave to be emitted as said outgoing light from said solid immersion lens.

Allowable Subject Matter

4. Claims 1-6 and 18-20 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Claims 1-6 and 18-20 have allowable over the prior art for at least the reason that the prior art fails to teach and/or suggest an infrared light condensing apparatus with a "solid immersion lens having a base plane on which a specimen is disposed in direct contact with the solid immersion lens" as set forth in the claimed combination.

Osawa et al., JP 05027180 A, disclose in fig. 1 or fig. 2 a light condensing apparatus, comprising: a lens (17) for accepting an incident light (from 5) or emitting an outgoing light, said lens having a base plane (fig. 1) on which a specimen (1) is to be disposed; an antenna (7 or 31) having a probe (7 or 31) disposed away from said base plane of said lens at a distance (figs. 1 or 2); a holder means (9 or 33), which is an arm, for retaining said antenna; and a position control means (11 or 35), which is a triaxial XYZ mechanical stage (in fig. 1), for controlling the position of a tip of said probe by means of said holder means (figs. 1 or 2), wherein operating said position control means allows: the incident light to concentrate as a near-field at a desired

Art Unit: 2872

position of the specimen on the base plane of said solid immersion lens or a near-field from a desired position of the specimen to be converted into a propagating wave corresponding thereto and then the propagating wave to be emitted as said outgoing light from said solid immersion lens (see at least the abstract) but the lens is not a solid immersion lens as claimed. Further, although Zhang et al., US 6,977,379, teach a light condensing apparatus (see figs. 4 and 5) including a solid immersion lens (412) for accepting an incident light or emitting an outgoing light, the specimen is not disposed in direct contact with the solid immersion lens.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
